F-12

1981 Accomplishments of the IHSA

The Office of the Information Handling System Architect (IHSA) was established as a staff function reporting directly to the DDA. The Office was staffed, a charter prepared and approved, and initial planning and implementing functions were undertaken. Included were the initiation of several projects defining the existing architecture of information handling systems in the Agency, the establishment of a milestone management review system applicable to the development of all IHSs in the Agency, and the initiation of the development of the Agency's first strategic plan for IHSs, to be completed in one year.
